

# Guidelines for Social HCV Remediation & Compensation procedures

**A Renewed Commitment to  
Achieving Market Transformation**

## High Conservation Values

**1**

Biological diversity, including endemic, rare, threatened or endangered species

**4**

Basic ecosystem services including protection of water catchments or erosion control

**2**

Landscape-level ecosystems and mosaics

**5**

Sites and resources fundamental for satisfying basic necessities of local communities

**3**

Rare, threatened, or endangered ecosystems, habitats or refugia

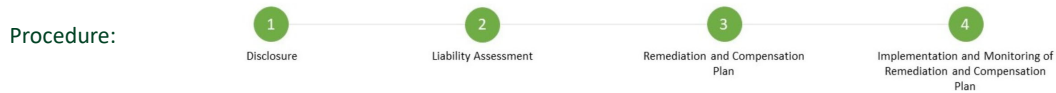

**6**

Areas of cultural or historical significance or importance for local communities

# HCV remediation & compensation procedure background

“To address land clearance and plantation development undertaken since 2005 without prior HCV assessment”

By November 2017: **226** Management Units with disclosed liabilities

**76,970.02 ha** Final Conservation Liability

# Remediation and compensation of intangible values where do we stand

How to compensate for social loss?

Hutan Desa (Village Forests) Indonesia

Hutan Harapan Indonesia

The Socio Bosque Program Ecuador

Loss of ecosystem services (HCV 4)

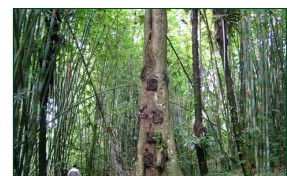

The Sustainable Commodities Compensation Mechanism

Katingan Mentaya Project Indonesia

Loss of basic needs (HCV 5)

Loss of cultural values (HCV 6)

More focused on environmental compensation (HCV 1-3)

# The difficulties of identifying social HCV loss

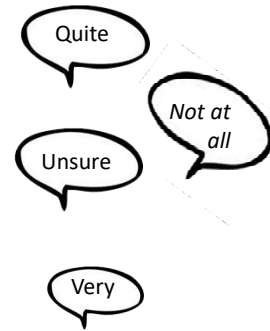

## 1 Is there potential social liability?

- ☞ Refer to the HCV toolkit at the time the clearing took place
- ☞ Incorporate revisions of definitions
- ☞ Were processes sufficient to identify HCV areas?
- ☞ Identify scope of missed social values at the time
- ☞ Determine social remediation according to the toolkit of that time

2

3

# Guidelines

- ✦ Targeted and structured consultation with communities
- ✦ Current needs – preferred options for compensation or remediation
- ✦ Representation of village loss, including women

*Attribution?*

*Current loss?*
